

Create a constellation map/overlay

A map of a constellation that we can see from our vantage point (B.C.) at this time of year (April)

Provide Coordinates of your constellation. These need to include direction (North, South, East & West) and the height above the horizon. You will also need to find out how much left or right of one of the above directions your constellation resides at this time of year in B.C.

The Project: (required)

1) Create an overlay out of cardboard/cardstock that is modeled on a constellation that can be seen in B.C. at this time of year.

2) History of the constellation ie....who named it and are there any stories associated with it

3) Your stamped page

Optional material for extra marks

4) Use a constellation that is recognized by a B.C. First Nations group

5) Provide detailed information about chemicals that are found in any of the stars that make up your constellation.
